

MARIEM SOUADI

Network & Security Engineer | Cloud & DevSecOps

Tunis, Tunisia • +216 56 105 166 • Mariemsouadi12@gmail.com • [LinkedIn](#) • [GitHub](#) • [Portfolio](#)

Profile

Network & Security Engineer with hands on production experience securing live network infrastructure, including VLAN segmentation, IPv4 addressing, firewall management, and L1/L2 incident response across Cisco and Huawei equipment, as a NOC Support Administrator. Complements this with strong Cloud & DevSecOps engineering: independently designed and delivered a hybrid Azure AKS and on premise Kubernetes platform, eliminating 100% of stored pipeline credentials via OIDC federated authentication and enforcing five automated security gates (SAST, SCA, IaC scanning, DAST, image signing). Comfortable operating from real time network incident response to building the automation and monitoring that prevents the next incident. Targeting Network Security, Cloud Security, and DevSecOps roles in Europe.

Professional Experience

NOC Support Administrator, Systems & Networks, Consup ON

Aug 2026 to Present

La Marsa, Tunisia

- Monitor and administer LAN/WAN/WiFi infrastructure across Cisco and Huawei equipment (switches, routers, access points), managing VLAN segmentation, IPv4 addressing/subnetting, and firewall rule sets to keep availability and performance within SLA.
- Triage and resolve L1/L2 incidents, including connectivity loss, latency spikes, packet loss, VLAN/trunk misconfigurations, routing, and firewall issues, using structured troubleshooting (ping/traceroute, interface and port channel checks, log analysis) and escalate complex cases to the right specialist team.
- Track alerts end to end through monitoring and ticketing platforms (fault detection, root cause analysis, resolution, closure) and maintain technical runbooks documenting equipment configs and recurring fixes.
- Support preventive maintenance, firmware upgrades, and equipment replacement on Cisco/Huawei hardware to reduce recurring failure points, coordinating with network, systems, and security teams to guarantee continuity of service.

Cloud & DevSecOps Intern, EXCELLIA Solutions

Feb 2026 to Jun 2026

Tunis, Tunisia, Trade Finance platform, hybrid Azure AKS

- Designed and delivered a cloud agnostic DevSecOps platform from scratch, securing multiple Spring Boot microservices across hybrid AKS and on premise K3s environments.
- Eliminated 100% of stored pipeline credentials via OIDC federated authentication (GitLab CI ↔ Azure AD); provisioned AKS, ACR, and Key Vault through Terraform IaC gated by Checkov.
- Built a centralized security template enforcing five pipeline gates: SonarQube SAST, Trivy SCA/SBOM, Checkov IaC, OWASP ZAP DAST, and Cosign image signing.
- Hardened rootless Kaniko builds using Distrosless and Alpine images, reducing image size by 82%; standardized zero touch deployments via ArgoCD App of Apps and Helm; deployed Prometheus/Grafana/Alertmanager and a Wazuh SIEM for PCI DSS/GDPR compliance monitoring.

Additional Experience: Flutter Developer Intern, Fidness Tunisie (Jun to Aug 2025), production ecommerce app (Flutter, Node.js, BLoC). Full Stack Developer Intern, Intech Solutions (Jun to Aug 2024), real time chat app (Django Channels/WebSockets, React).

Featured Projects

AI Based Network Intrusion Detection System

Python · Scikit learn · TensorFlow/Keras · Pandas, Ongoing Personal Project

- Built a 3 level ML pipeline on the CICIDS2017 dataset (~2.2M network flows): (1) binary BENIGN/MALICIOUS classification, (2) multiclass attack type classification, (3) regression of a continuous severity score.
- Engineered the full preprocessing/EDA pipeline (deduplication, ANOVA F score feature ranking, correlation based feature pruning) and benchmarked Logistic Regression, Decision Tree, and Random Forest classifiers.
- Designed a semisupervised autoencoder trained exclusively on benign traffic to flag anomalous and unseen attack types via reconstruction error, and compared it against the supervised Random Forest baseline.
- **In progress:** extending the pipeline with MLOps practices (experiment tracking, model registry, CI/CD for model retraining/deployment) and deploying it to the cloud with security hardened practices (containerization, secrets management, IAM).

DevOps Infrastructure Automation with Ansible

Ansible · Docker · SonarQube · Kubernetes

- Built an Infrastructure as Code project using Ansible to stand up a complete DevOps environment (Docker, SonarQube, CI tooling) on a Kubernetes ready foundation, ensuring the stack deploys identically every time.

Technical Skills

Network & Security Ops: VLAN segmentation, IPv4 addressing and subnetting, TCP/IP, firewall rules, LAN, WAN, and WiFi troubleshooting, routing and switching, L1/L2 incident response, NOC monitoring, SLA management

Network Equipment: Cisco and Huawei switches and routers, access points, structured cabling

Cloud & Infrastructure: Azure (AKS, ACR, Key Vault), Terraform, Ansible, Hybrid Kubernetes (Cloud + K3s)

Security & Compliance: Wazuh SIEM, SonarQube, Trivy, Checkov, OWASP ZAP, Cosign, OIDC/Federated Identity

DevSecOps & CI/CD: GitLab CI/CD, ArgoCD, Helm, Docker, Kaniko; Prometheus, Grafana, Alertmanager

Programming & ML: Java, Spring Boot, Python, Scikit learn, TensorFlow/Keras, Node.js, React, Angular, Flutter, Django

Languages: English (Professional), French (Professional), Arabic (Native)

Education

Engineering Degree, Computer, Network & Multimedia (CNM)

Graduated Jun 2026

Polytech International, Tunis, Specialization: Software Engineering & Information Systems

Certifications & Training

- Professional Business English, 100h (Apr to Jun 2026)
- AWS Cloud Foundations, Amazon Web Services (2025)
- Professional Cloud Azure & DevSecOps Training, 100h (Oct to Dec 2025)
- Professional AI Developer Training, 150h (Aug to Oct 2025)
