

MARIEM SOUADI

Network & Security Engineer | DevSecOps & Cloud Platform Engineer

Tunis, Tunisia | +216 56 105 166 | Mariemsouadi12@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

Engineer working across network & security operations and DevSecOps cloud platform engineering, backed by full-stack development skills (Spring Boot, Django, Node.js, React, Angular, Flutter). Currently keep live network infrastructure available and secure as a NOC Support Administrator, after independently designing and delivering a cloud-agnostic DevSecOps platform — hybrid Kubernetes, GitOps, and automated security gates — during a 5-month internship. Comfortable operating end to end: from real-time incident response on live infrastructure to shipping production systems from commit to deployment.

PROFESSIONAL EXPERIENCE

NOC Support Administrator – Systems & Networks • Consup ON

Aug 2026 – Present

La Marsa, Tunisia

- Monitor LAN, WAN, and Wi-Fi infrastructure in real time, keeping service availability and performance within SLA across the full network estate.
- Triage, diagnose, and resolve Level 1/2 incidents — connectivity loss, latency spikes, packet loss, equipment failures — escalating complex cases to the right specialist team.
- Track alerts end to end through monitoring and ticketing platforms, from detection to root-cause resolution and closure.
- Deliver technical support to internal teams and external clients, consistently meeting SLA response and resolution targets.
- Support preventive maintenance and firmware/equipment upgrades to reduce recurring failure points.
- Document incidents and maintain technical runbooks, coordinating with network, systems, and security teams to guarantee continuity of service.

Cloud & DevSecOps Intern • EXCELLIA Solutions

Feb 2026 – Jun 2026

Tunis, Tunisia — Trade Finance platform (hybrid Azure AKS)

- Designed and delivered a cloud-agnostic DevSecOps platform from scratch, securing 13 Spring Boot microservices across hybrid AKS and Kubernetes environments.
- Eliminated 100% of stored pipeline credentials with OIDC federated auth (GitLab CI ↔ Azure AD), provisioning AKS, ACR, and Key Vault through Terraform IaC gated by Checkov.
- Built a centralized Security & Template Repository enforcing five pipeline gates: SonarQube SAST, Trivy SCA/SBOM, Checkov IaC, OWASP ZAP DAST, and Cosign signing.
- Hardened rootless Kaniko builds with Distroless/Alpine images, cutting image size by 82%, and standardized zero-touch deployments via ArgoCD App-of-Apps and reusable Helm charts across two clusters.
- Deployed Prometheus/Grafana/Alertmanager, Wazuh SIEM, and a GitOps-managed AI Security Analyzer to improve compliance monitoring, event detection, and vulnerability triage.

Flutter Developer Intern • Fidness Tunisie

Jun 2025 – Aug 2025

Tunis, Tunisia

- Built and shipped a production e-commerce mobile app for client ÉRIC KAYSER using Flutter and a Node.js backend.
- Applied clean architecture and the BLoC pattern to fully decouple state management from UI, improving testability and long-term maintainability of the codebase.

Full Stack Developer Intern • Intech Solutions

Jun 2024 – Aug 2024

Tunis, Tunisia

- Designed and built a real-time internal chat application from scratch using Django, Django Channels/WebSockets, and a React.js front end, enabling instant company-wide messaging.
- Implemented the WebSocket connection layer and message broadcast logic handling concurrent users without message loss or duplication.

KEY PROJECTS

- **FinTrack, Personal Finance Management Microservices** — *Java, Spring Boot, Microservices* — Designed and built a personal finance management system on a Spring Boot microservices architecture, with independent services for accounts, transactions, and reporting.
- **Travel Agency Platform** — *React, Spring Boot, REST, GraphQL, SOAP* — Built a full-stack travel agency platform exposing the same booking functionality through REST, GraphQL, and SOAP APIs for modular client integrations.
- **Crop Image Classification with Transfer Learning** — *Python, TensorFlow/Keras, Streamlit* — Built a 5-class crop image classifier using VGG16 transfer learning and Random Forest benchmarking, achieving 92.1% accuracy and deploying the model as a Streamlit app.
- **E-Commerce Platform** — *React, Node.js, MySQL, Docker* — Built an enterprise-ready e-commerce application with containerization and configuration management on a full-stack JavaScript codebase.
- **HireLink, AI-Driven Recruitment Platform** — *Python, OpenAI API* — Engineered an ATS-style resume-screening pipeline to extract structured skills and experience, score job fit, and automate recruiter outreach.
- **DevOps Infrastructure Automation with Ansible** — *Ansible, Docker, SonarQube, Kubernetes* — Built an Infrastructure-as-Code project using Ansible to automate a complete DevOps environment — Docker, SonarQube, and CI tooling — on a Kubernetes-ready foundation.

EDUCATION

Engineering Degree, Computer, Network & Multimedia (CNM) — Polytech International, Tunis

Specialization: Software Engineering & Information Systems | **Graduated June 2026**

TECHNICAL SKILLS

Network & Security Operations: TCP/IP, LAN/WAN/Wi-Fi, Incident Response (L1/L2), NOC Monitoring, SLA Management, Ticketing Systems, Wazuh SIEM

Languages & Frameworks: Java (Spring Boot), Python (Django, Flask), JavaScript/TypeScript (Node.js, React, Angular), Dart (Flutter)

API Design: REST, GraphQL, SOAP, WebSockets

Databases: MySQL, MongoDB, PostgreSQL

Cloud & DevOps: Kubernetes, Docker, Terraform, Ansible, ArgoCD, GitLab CI, Azure (AKS, ACR, Key Vault)

AI/ML: TensorFlow, PyTorch, Scikit-learn, OpenAI API, Anthropic API, Reinforcement Learning

Languages: English (Professional), French (Professional), Arabic (Native)

CERTIFICATIONS

- Professional Business English — Apr 2026 - Jun 2026 (100h)
- Professional Cloud Azure & DevSecOps Training — Oct 2025 - Dec 2025 (100h)
- Professional AI Developer Training — Aug 2025 - Oct 2025 (150h)
- AWS Cloud Foundations — Amazon Web Services (2025)
